Fashion Biz Public API How-To Guide

(Last updated July 2026)

History:

1. First release: Product detail for each slug (June 2019)
2. New endpoint to return all New Styles in a product list (February 2020)
3. New endpoint to return all New Colours in a product list (February 2020)
4. Endpoint to query all the current tags used by products (July 2022)
5. Endpoint to query the stock level of a product by colour (May 2023)
6. Added the option to change the number of products queried (April 2025)
7. Added endpoint that lists all the products without pages (September 2025)
8. Added endpoint that includes description of product in a list format (September 2025)
9. Updated endpoints to allow for calling of Good-Mates Products with permission (October 2025)
10. Replaced Biz-care brand with Inaura brand (July 2026)

Overview

The Fashion Biz API is designed to share our product information in an easier and smarter way. Instead of relying on CSV files to upload and update our product data in your system, you can use the Fashion Biz public API to retrieve the latest product information. The Fashion Biz public API provides the same information as the Fashion Biz websites and webstore.

This public API is a work in progress. Response format and information may change in the future as development work progresses, and more endpoints are added

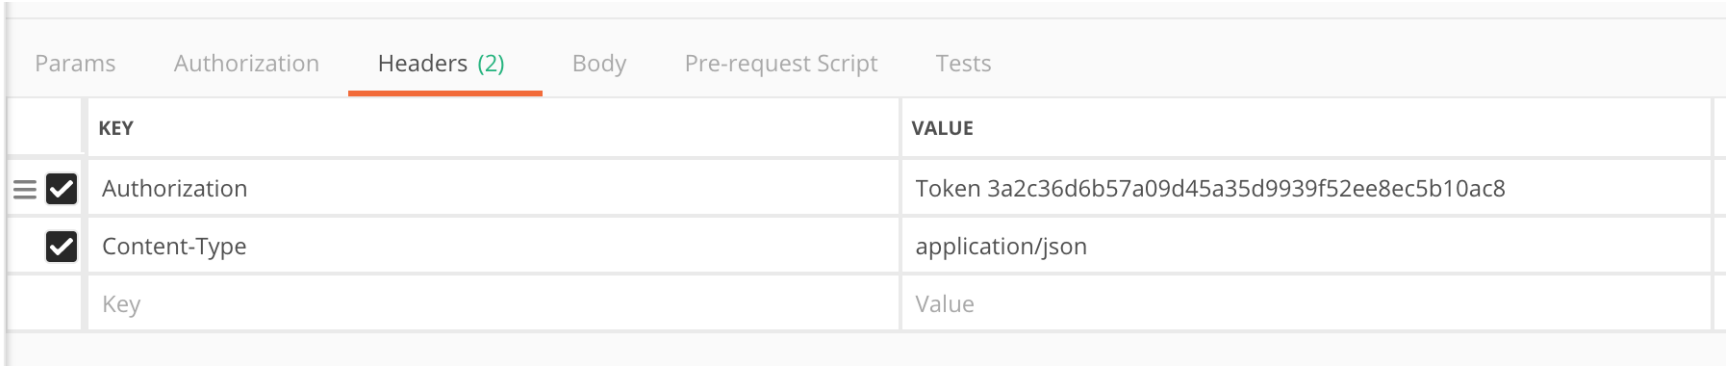

This documentation includes details for the following Fashion Biz public API endpoint:

API	HTTP Method	Example
Product Detail	GET	https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p608ms (format: https://www.fashionbizapis.com/api/v3/products/:brand/:branch/:slug)
Product List of a brand	GET	https://www.fashionbizapis.com/api/v3/products/biz-collection/nz (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>)
New Colour	GET	https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/?sales_status=new%20color (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:query>)
New Products	GET	https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/?sales_status=new%20style (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:query>)
Single list of all products within brand	GET	https://www.fashionbizapis.com/api/v3/simple/products/biz-collection/nz (format: https://www.fashionbizapis.com/api/v3/simple/products/<:brand>/<:branch>)
Product list with description	GET	https://www.fashionbizapis.com/api/v3/description/products/biz-collection/nz (format: https://www.fashionbizapis.com/api/v3/description /products/<:brand>/<:branch>)
Tags / Categories of products	GET	https://www.fashionbizapis.com/api/v3/products/categories (format: https://www.fashionbizapis.com/api/v3/products/categories)
Stock level of products	GET	https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p400ms/Cyan (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:product_slug>/<:colour>)

Authentication

The product detail API endpoint requires authentication. You need to provide the API key in your request header:

- content-type:application/json
- Authorization: ‘Token ‘+ your token

How do I get slug codes and color?

You can obtain all product codes from the current google drive root folder by using the following link:
https://drive.google.com/drive/folders/1xD7QE4Hx3AIqRM73bVxjB2eFqjXmSeSi?usp=sharing
Your unique token enables you to access and load the Fashion Biz products based on your country.

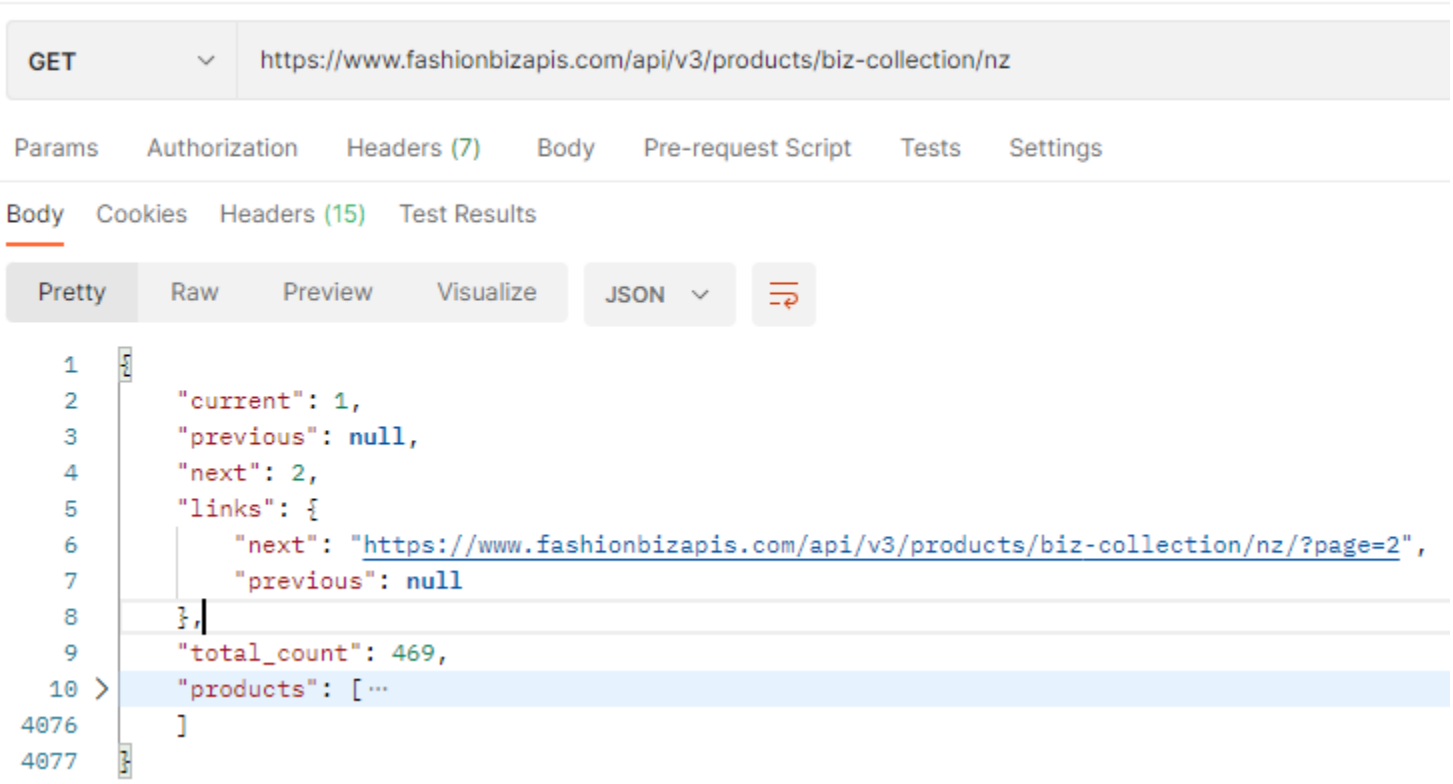

Below are all the brand options you can use, please copy them exactly as they are:
“biz-collection”, “inaura”, “biz-corporates”, “syzmik”, “good-mates”
As for the branch, use the shorthand of your country:
“nz”, “au”, “ca”
Tier pricing names:
“1-99” – [“biz-collection”, “inaura”, “biz-corporates”, “syzmik”] “Gold” – [“good-mates”]

Product List API:

Let's look at an example of using this API
(format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:options>)
URL call: https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/
https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/?sales_status=new%20style

Description: This API will list the products in a country-brand combination. You have some parameters you can configure to customize the product list you want. /?gender=(men, women, unisex) /?sales_status=(new%20style, clearance, normal) /?per_page =(number)

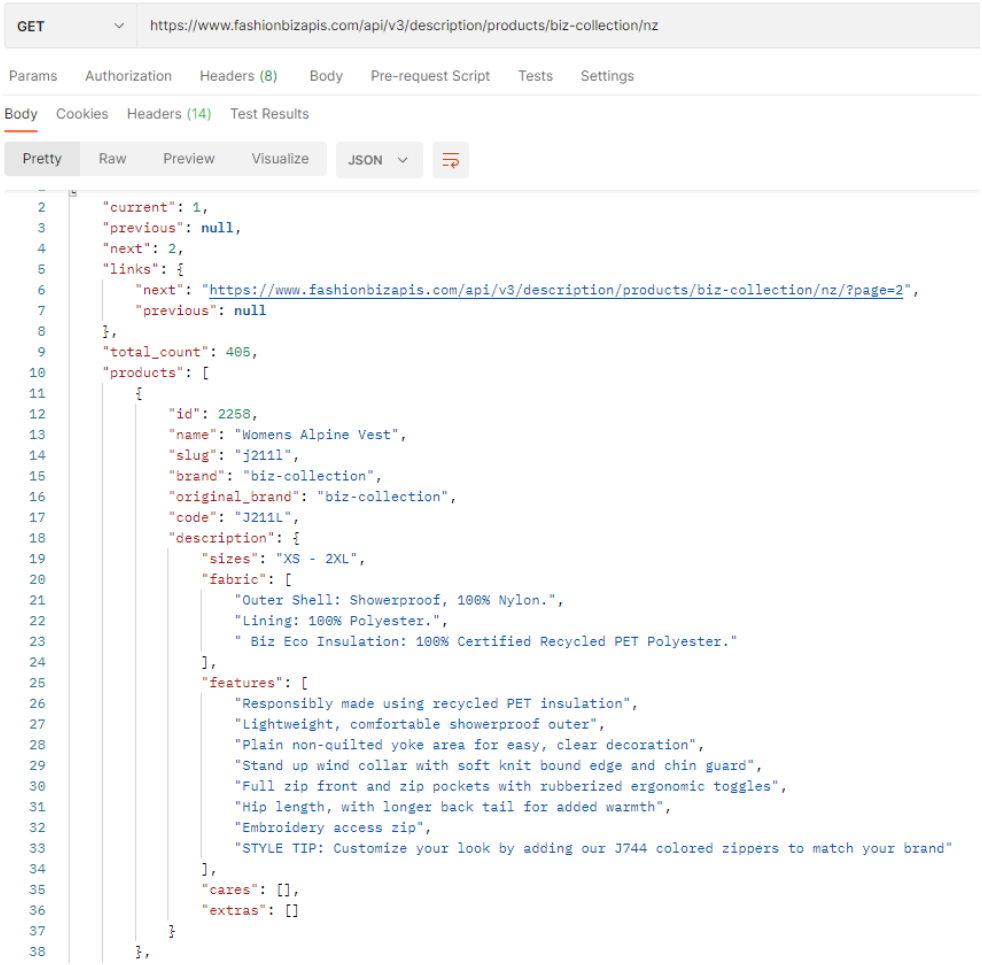

https://www.fashionbizapis.com/api/v3/products/biz-collection/nz

Product List Simple API:

Let’s look at an example of this API
(format: https://www.fashionbizapis.com/api/v3/simple/products/<:brand>/<:branch>)
URL call: https://www.fashionbizapis.com/api/v3/simple/products/biz-collection/nz

Description: This API will list all the products in a country-brand combination without pagination. There will also be a field to show how many products are available in that brand-country combination.

        }
    },
```

Product List with only Description API:

Let’s look at an example of this API
(format: https://www.fashionbizapis.com/api/v3/description/products/<:brand>/<:branch>)
URL call: https://www.fashionbizapis.com/api/v3/description/products/biz-collection/nz

Description: This API will list the products in a country-brand combination along with a description field that is usually a part of the product detail API.

Product Detail API:

Let's look at P608MS (Biz Collection) as an example for this APIs:
(format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:query>)
URL call: https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p400ms
https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/?sales_status=new%20style

Description: This is the two APIs rolled into one, on one hand you have the product detail API which will list all the data about that one product, (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:product_slug>). On the other hand, if you use a query, such as a sales_status, you can find a list of products which will fit with whichever query you tried (format: https://www.fashionbizapis.com/api/v3/products/<:brand>/<:branch>/<:query>)
NOTE: The price for the tier names is different for good-mates, as they are "Gold" instead of "1-99".

Product Tags/ Categories API:

Let’s look at an example of this APIs:
(format: https://www.fashionbizapis.com/api/v3/products/categories)
URL call: https://www.fashionbizapis.com/api/v3/products/categories

Description: This is a simple API that displays the tags or categories that are currently existing in our database.

Structure:

Product Stock Level API:

Let's look at P400MS (Biz Collection) as an example for this APIs: (format: https://www.fashionbizapis.com/api/v3/products/categories)
URL call: https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p400ms/Cyan

Description: This API returns the stock level for all the sizes of a certain colour for a product. You need to make sure the colour name exactly matches up with what's shown in the product details API as it is case sensitive. For colour names with a space between an example would be (https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p400ms/Cyan). For colour names with a slash in between replace with a dash "-", an example would be (https://www.fashionbizapis.com/api/v3/products/biz-collection/nz/p700ks/Magenta-Black-Silver)

Structure:

```
{
        "customer_no"
        "price"
        "currency"
        "items": [
                "sku"
                "formattedItemNo"
                "size"
                "eta": [
                        "eta"
                        "quantity"
                        ],
                "stock": [
                        "location"
                        "qtyAvailable"
                        ]
                ],
        "color_id"
}
```
